```

```
connection = get_connection(conn_string)
```

time: 135 ms (started: 2021-03-14 18:49:41 +00:00)

### 1.2 Visualizations

#### 1.2.1 Expiration vs Activation Week

```
[4]: df = sector_activation_and_expiration_by_week(connection)
```

time: 5min 37s (started: 2021-03-14 18:49:41 +00:00)

```
[5]: fig_df = (df.reset_index()
            .assign(sqrt_sector_count=lambda df: df.sector_count ** (1 / 3))
            .assign(log_sector_count=lambda df: np.log(df.sector_count))
            .assign(sector_lifetime_days=lambda df: (df.expiration_week - df.
↳activation_week).dt.days)
            )
```

time: 20.3 ms (started: 2021-03-14 18:55:19 +00:00)

```
[6]: fig = px.scatter(fig_df,
                      x='activation_week',
                      y='expiration_week',
                      size='sqrt_sector_count',
                      color='sector_count',
                      title='Sector count / Expiration Week grouped by Activation_
↳Week')
fig.show()
```

time: 444 ms (started: 2021-03-14 18:55:19 +00:00)

```
[7]: s = fig_df.groupby('activation_week').apply(lambda df: df.sector_count / df.
↳sector_count.sum())
s.name = 'count_share'

z_df = fig_df.assign(count_share=s.values)

fig = px.scatter(z_df,
                 x='activation_week',
                 y='sector_lifetime_days',
                 size='count_share',
                 color='count_share',
                 title='Activated Sectors Lifetime across Time (weekly)')
fig.show()
```

time: 113 ms (started: 2021-03-14 18:55:20 +00:00)

```
[8]: s = fig_df.groupby('activation_week').apply(lambda df: df.sector_count / df.
↳sector_count.sum())
s.name = 'count_share'

z_df = fig_df.assign(count_share=s.values)

fig = px.scatter(z_df,
                 x='activation_week',
                 y='expiration_week',
                 size='count_share',
                 color='count_share',
```

```

        title='Share of Expiring Sectors grouped per Activation Week')
fig.show()

```

time: 136 ms (started: 2021-03-14 18:55:20 +00:00)

```

[9]: categories = pd.cut(fig_df.sector_lifetime_days, bins=3, labels=False)
z_df = fig_df.assign(lifetime_cat=categories)
z_df = z_df.groupby(['lifetime_cat', 'activation_week']).sector_count.sum().
    ↪reset_index()
px.scatter(z_df,
           x='activation_week',
           y='lifetime_cat',
           size='sector_count',
           color='sector_count',
           title='Count of Sectors Lifetime Category grouped by Activation_
    ↪Week')

```

time: 88.1 ms (started: 2021-03-14 18:55:20 +00:00)

```

[10]: categories = pd.cut(fig_df.sector_lifetime_days, bins=3, labels=False)
