1 Sector Life Metrics Dashboard

1.1 Setting-up

```
[1]: %load_ext autotime  
  
%load_ext autoreload  
  
%autoreload 2
```

time: 34.4 ms (started: 2021-02-17 17:07:16 -03:00)

```
[2]: # External dependences  
import pandas as pd  
import numpy as np  
import plotly.express as px  
  
# Move path to parent folder  
import sys  
sys.path.insert(1, '../')  
  
# Internal dependences  
from filecoin_metrics.connection import get_connection, get_connection_string  
from filecoin_metrics.metrics import *
```

time: 2.62 s (started: 2021-02-17 17:07:18 -03:00)

```
[3]: conn_string = get_connection_string('../config/sentinel-conn-string.txt')  
connection = get_connection(conn_string)
```

time: 23.4 s (started: 2021-02-17 17:07:20 -03:00)

1.2 Visualizations

1.2.1 Expiration vs Activation Week

```
[4]: df = sector_activation_and_expiration_by_week(connection)
```

time: 4min 56s (started: 2021-02-17 17:07:44 -03:00)

```
[5]: fig_df = (df.reset_index()
            .assign(sqrt_sector_count=lambda df: df.sector_count ** (1 / 3))
            .assign(log_sector_count=lambda df: np.log(df.sector_count))
            .assign(sector_lifetime_days=lambda df: (df.expiration_week - df.
↳activation_week).dt.days)
        )
```

time: 25.5 ms (started: 2021-02-17 17:15:23 -03:00)

```
[6]: fig = px.scatter(fig_df,
                        x='activation_week',
                        y='expiration_week',
                        size='sqrt_sector_count',
                        color='sector_count',
                        title='Sector ount / Expiration Week grouped by Activation_
↳Week')
fig.show()
```

Sector count / Expiration \

time: 328 ms (started: 2021-02-17 17:15:24 -03:00)

```
[14]: s = fig_df.groupby('activation_week').apply(lambda df: df.sector_count / df.
        ↪sector_count.sum())
s.name = 'count_share'

z_df = fig_df.assign(count_share=s.values)

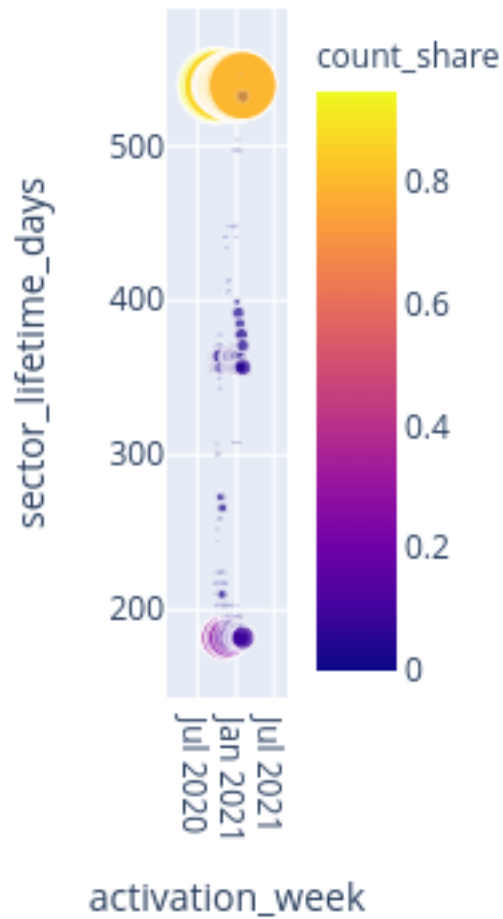

fig = px.scatter(z_df,
                 x='activation_week',
